

INVITATION

PLATINUM CASTING SEMINAR 06. + 07.03.2025

During the two-day seminar the participants get taught in a theoretical as well as practical part. The agenda includes the basics and the special characteristics of casting platinum.

Considering the whole casting process we are talking about how to design the casting model itself and how to create the best negative model. By using various designs we want to experience the different factors and how they influence the quality of the end product like vacuum/protective gas, over pressure and vibration.

The seminar is addressed to all technicians, casters, designers, goldsmiths and rookies who would like to update their knowledge on platinum casting or would like to start working on it. You can also bring your own casting models to the seminar.

Please do not hesitate to contact us if you have further questions.
